

South Carolina Counties by Overall Child Well-being 2005

Overall Child Well-being – Rank is determined by U.S. Problem Ratios. Those ratios include low birth weight babies, infant mortality rate, child death rate, violent teen deaths (15–19), teen birth rate, idle teens (16–19), kids in poverty, and single-parent families with children.

Note: The problem rate for each county is the simple average of its rate divided by the U.S. rate for the Kids Count indicators.
